Posterior Teeth P2-P6 Function and Design

The importance of correct function cannot be overstated. Well defined points of initial contact between working cusps and fossae as well as defined excursive pathways between the opposing cusps ensure a stable denture and efficient mastication.

Enigma posteriors have been designed with a 23° cuspal angle and comply with the above principles of occlusion. A well defined mastication zone and reduced lingual cusps increase tongue space and lower the occlusal forces.

Unique **enigma** Characteristics

Natural colour blending in **enigma** teeth

The **enigma** system uses advanced tooling and precise computer-control of multiple colour layers to reproduce the colour variations found in natural teeth. The photo below shows some of the features that help **enigma** teeth appear so alive and real.

- **Subtle mamelon effect**
In both upper and lower centrals giving an appearance of depth.
- **Translucent incisal edges**
In both centrals and laterals.
- **Greater opalescence of laterals**
To add vitality and make the mouth appear more three dimensional.
- **Demineralisation points**
Placed in some of the teeth out of every set to break up the uniformity.
- **Darker necks**
As the root of a natural tooth is darker than its crown so the neck of an Enigma tooth contrasts with its body.
- **Longer necks**
Many of the tooth moulds have necks which are longer and more naturally tapered than many denture teeth, allowing the simulation of gingival recession necessary to match adjacent natural teeth in partial denture wearers.

Schottlander's Innovation Recognised

In 2004 Schottlander were honoured to receive the Queen's Award for the Enigma & Natura teeth and denture systems.

Schottlander's Innovation Recognised

The official citation from the Queen's Awards Office read:

"The award to Davis Schottlander & Davis Ltd recognises this company's success in continuously improving a range of teeth and dentures. The Company has created Enigma and Natura, two ranges of teeth and dentures that not only look more natural but also function better. This has been achieved by using advanced acrylic materials, a wider range of colours and better mechanical design, to give an improved "bite". Options available now take account of the different characteristics of ethnic groups. Continuous innovation in design and professional marketing have enabled this award winner to achieve a substantial share of the market and considerable commercial success whilst providing customers with better looking and performing dentures".

With **enigma** only you and your patients need know they're wearing dentures

Mould Chart

Closer to Nature

After more than five years research and development Schottlander has created the **enigma** system - a range of teeth that means in future denture-wearing can be a secret shared only between dentist and patient. **enigma** teeth not only accurately reproduce the wide range of shades, translucencies and vitality of natural teeth but also assure exceptional strength and durability in the mouth. Their many advantages include:

- Natural colour blending through advanced tooling and precise computer-control of multiple colour layers. (see facing page).
- Naturally occurring blue/white opalescence and fluorescence.
- Canines darker mesially and more translucent laterally.
- Anteriors also available in pairs of centrals, laterals and canines. (see opposite).
- A wide range of Anterior moulds.
- CE marked and manufactured under ISO 9001 quality standard, and in accordance with EN ISO 22112 standard for artificial teeth and ANSI/ADA specification number 15.
- **enigma** teeth are provided in the 16 standard shades A1-D4 in every mould as well as the new Hollywood shade HBO, which reproduces bleached teeth whilst still retaining the **enigma** vitality. The same vitality can be found across the whole **enigma** shade range with even the very light shades A1 and B1 containing subtle variations in colour and translucency.
- Superior physical properties - see Technical Brochure.

enigma anteriors are also available in pairs. In the natural dentition, canine teeth often appear darker than - or of a different shade to - neighbouring centrals and laterals. To reproduce this using other brands often requires buying two sets and wasting one of them. With **enigma** teeth you simply order exactly what you need from the wide range available.

Suggested Combinations

Centrals/Laterals	Canine
A1	A2
A2	A3
A3	A3.5
A4	B4
B1	B2
B2	B3
B3	B4
C2	D3
D2	D3

(Note: for a completely natural appearance, **enigma** teeth should be used with **enigma** High-Base and **enigma** Colour Tone).
